

OPAL Engine

Secure, Fast Web-Based Reports

As a small business owner, running your company is a 24x7 job. Using the OPAL Engine System, there's no need for that job to always have you tied to the office. This secure and powerful data access system can generate reports from almost any existing systems in your office, or provide powerful new features that fit your business, from any Internet computer in the world, anytime.

Thousands of Potential Applications including:

- Accounting System Reports
- Employee Productivity Tracking & Time Management
- Customer Order & Account Status
- Address Book & Contact Management
- Online Databases for Inventory
- Process Tracking & Management

High Security:

The OPAL Engine can provide varying levels of security starting with our Basic Security, which uses 128-bit certificates to encrypt all transactions -- just like banks and other financial institutions use. For mission-critical data, packages are available that use hardened VPNs, client certificates, and even the powerful new Two-Factor authentication to protect your data from everyone except authorized users.

No Equipment to Maintain:

The OPAL Group's multiple high-speed Internet connections provide high availability of your data 24 hours a day. The OPAL Group will provide and maintain any equipment necessary to run the central system, so all you need is a desktop computer and a web browser. This powerful turnkey system gives you the tools used by large enterprise corporations at a price and convenience that is made specifically Small Business friendly.

If you're looking to un-teather your business and gain the flexibility to focus on what's really important, contact a representative from The OPAL Group for a free in-house consultation and demonstration.

Benefits:

- Access any ODBC-compliant database securely through powerful, real-time reports.
- Choose from a variety of existing applications, or design your own. Our experienced developers can create your perfect system at surprisingly low cost.
- Works with any major Web browser.
